

Optical/Photonic Exchanges

Freek Dijkstra, Cees de Laat

University of Amsterdam

<http://www.science.uva.nl/~delaat/articles/2004-2-opt-ex.pdf>

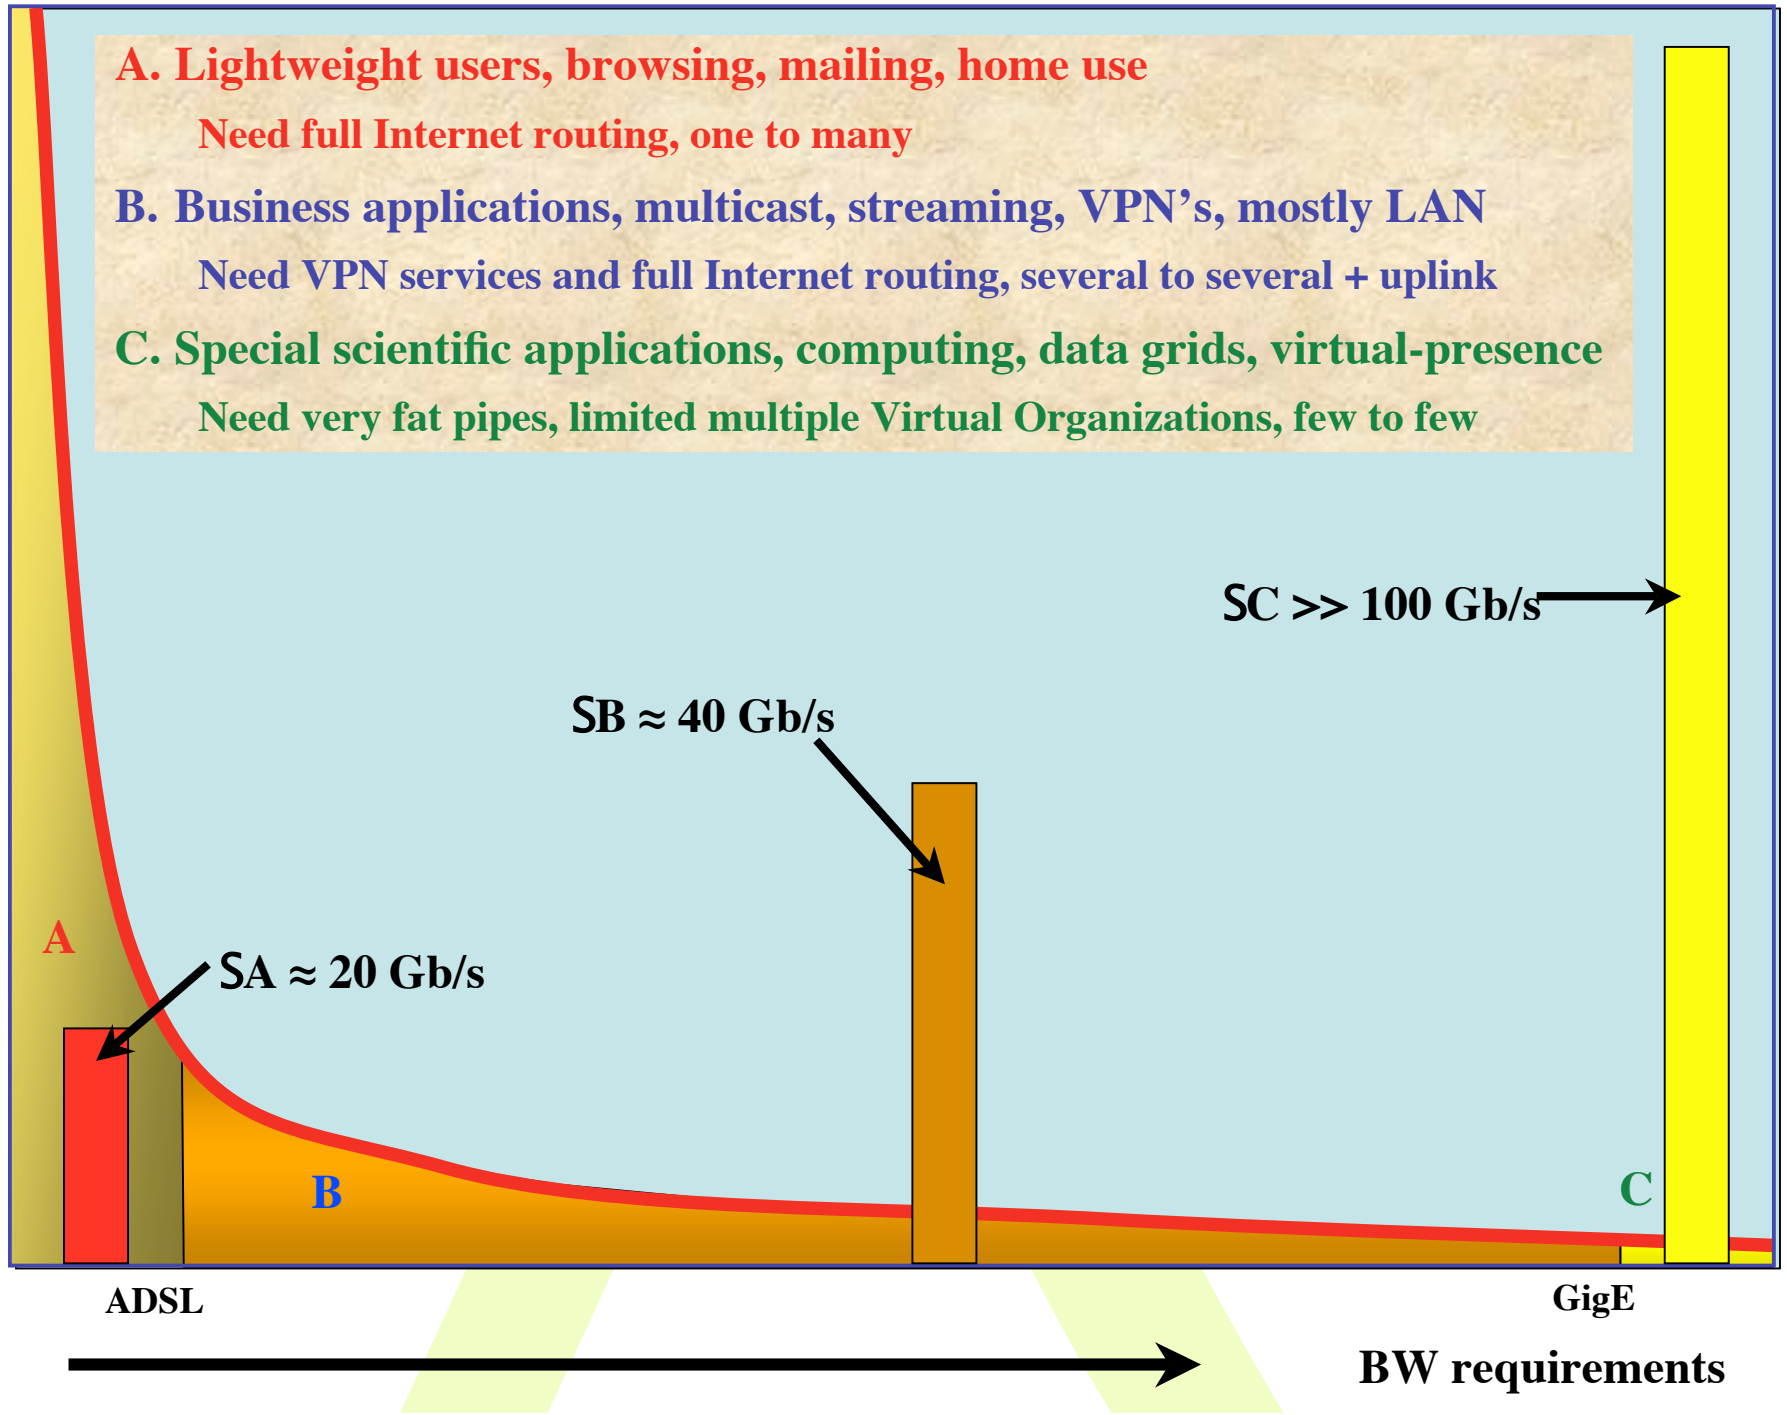

Exchanges

- Just fibers
 - Each provider has fibers to the other providers [$n*(n-1)$]
- ATM based
 - Through one connection ATM pvc's to all peers [$n*(n-1)$]
constrained
 - StarTap
- Ethernet based
 - Ethernet switch as packet peering point (extended) [n]
differently flexibly constrained
 - AMS-IX
- Lambda based
 - MEMS, DWDM, SONET (pseudo optical;-), Ethernet, etc. mix
 - NetherLight++, StarLight++

e
r
s

- A. Lightweight users, browsing, mailing, home use**
Need full Internet routing, one to many
- B. Business applications, multicast, streaming, VPN's, mostly LAN**
Need VPN services and full Internet routing, several to several + uplink
- C. Special scientific applications, computing, data grids, virtual-presence**
Need very fat pipes, limited multiple Virtual Organizations, few to few

ADSL

GigE

BW requirements

Services

<div style="text-align: right;">SCALE</div> <div style="text-align: left;">CLASS</div>	2 Metro	20 National/ regional	200 World
A	Switching/ routing	Routing	ROUTER\$
B	Switches + E-WANPHY VPN's	Switches + E-WANPHY (G)MPLS	ROUTER\$
C	dark fiber DWDM MEMS switch	DWDM, TDM / SONET Lambda switching	Lambdas, VLAN's SONET Ethernet

So what?

- **Costs of optical equipment 10% of switching 10 % of full routing equipment for same throughput**
 - 10G routerblade -> 100-300 k\$, 10G switch port -> 10-20 k\$, MEMS port -> 0.7 k\$
 - DWDM lasers for long reach expensive, 10-50k\$ (???)
- **Bottom line: look for a hybrid architecture which serves all classes in a cost effective way (A -> L3 , B -> L2 , C -> L1)**
- **Give each packet in the network the service it needs, but no more**

L1 - 0.7 k\$/port

L2 - 10-20 k\$/port

L3 - 100-300 k\$/port

Optical Switch

@ NetherLight

in SURFnet POP @

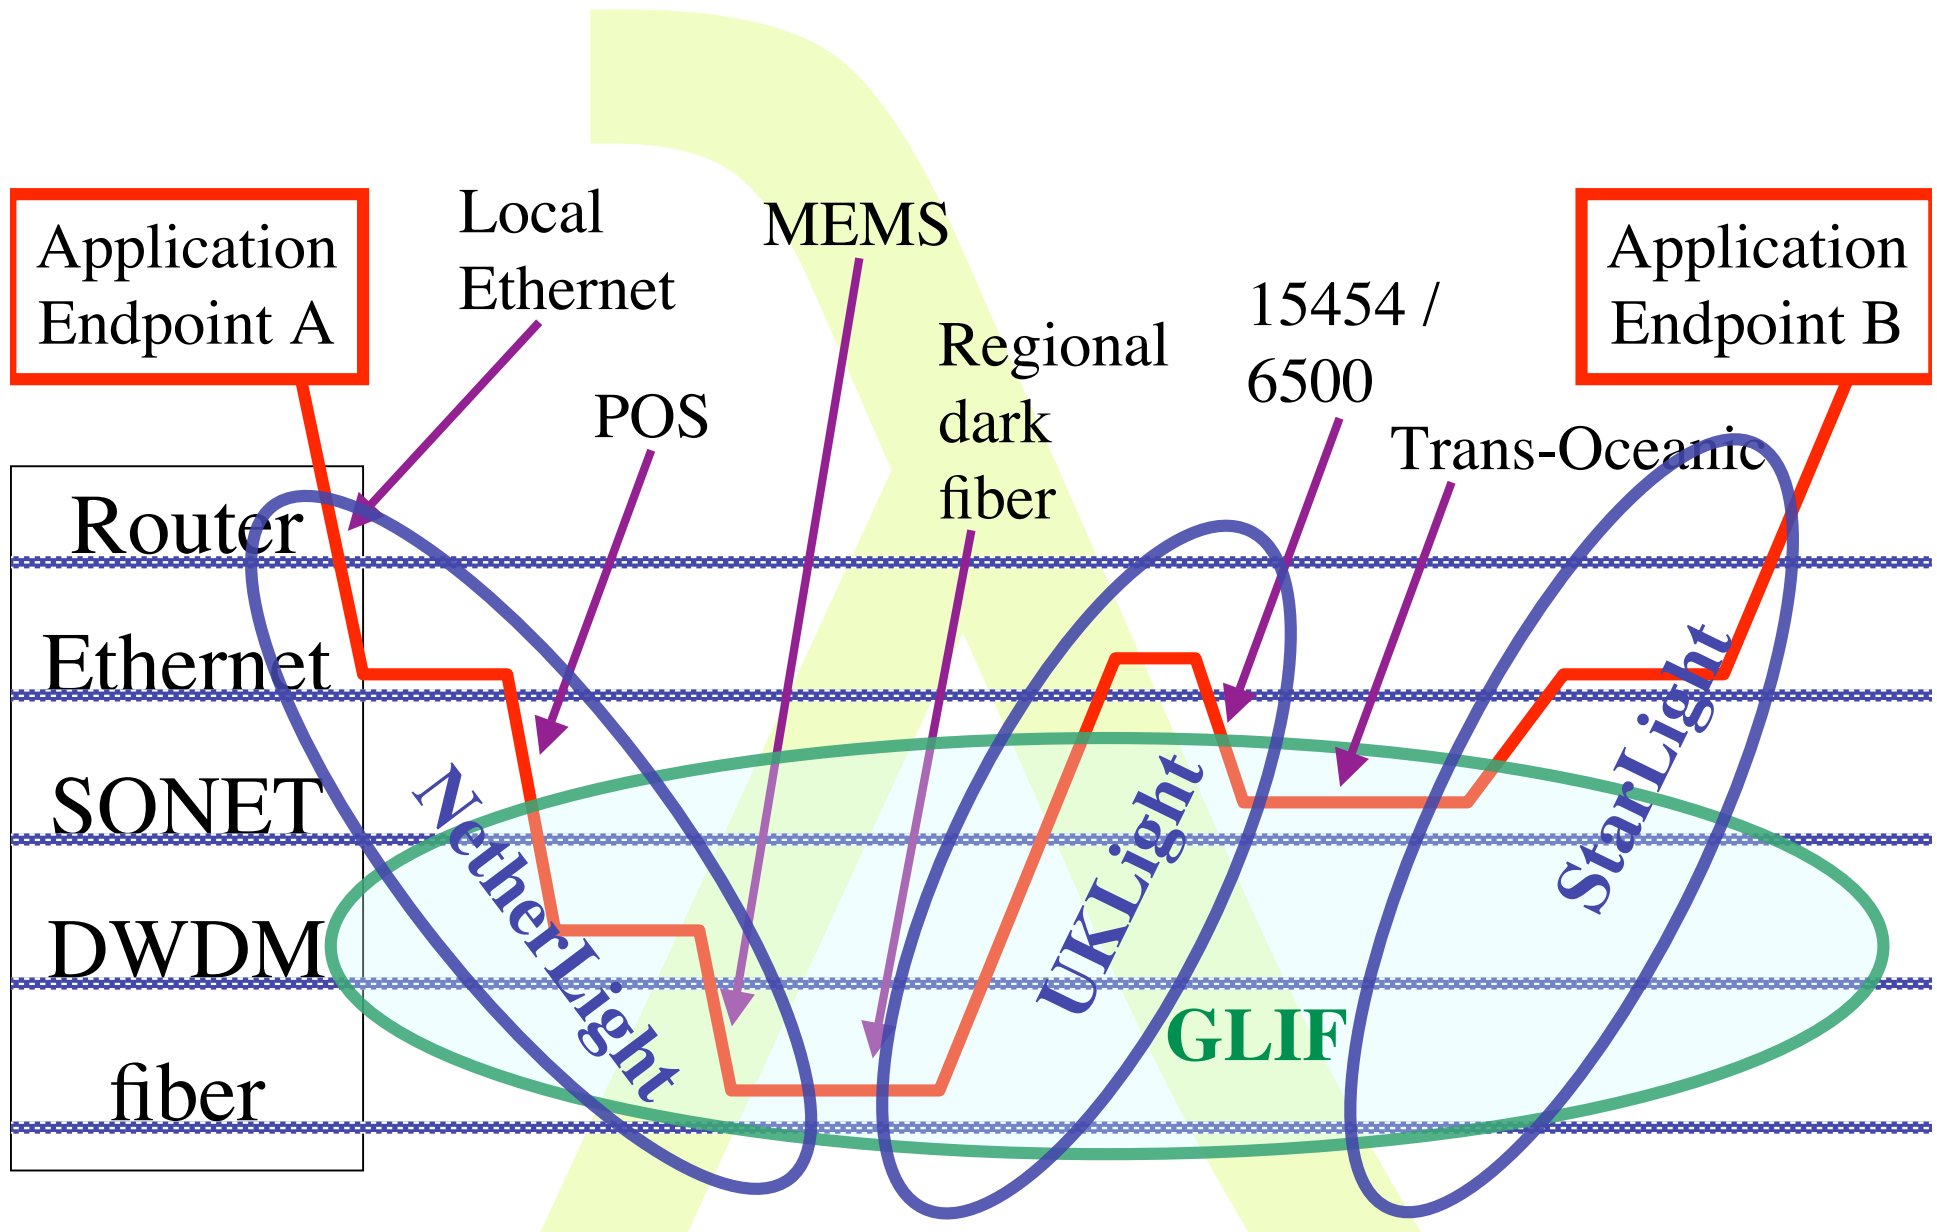

SARA

Costs 1/100th of a
similar throughput
router

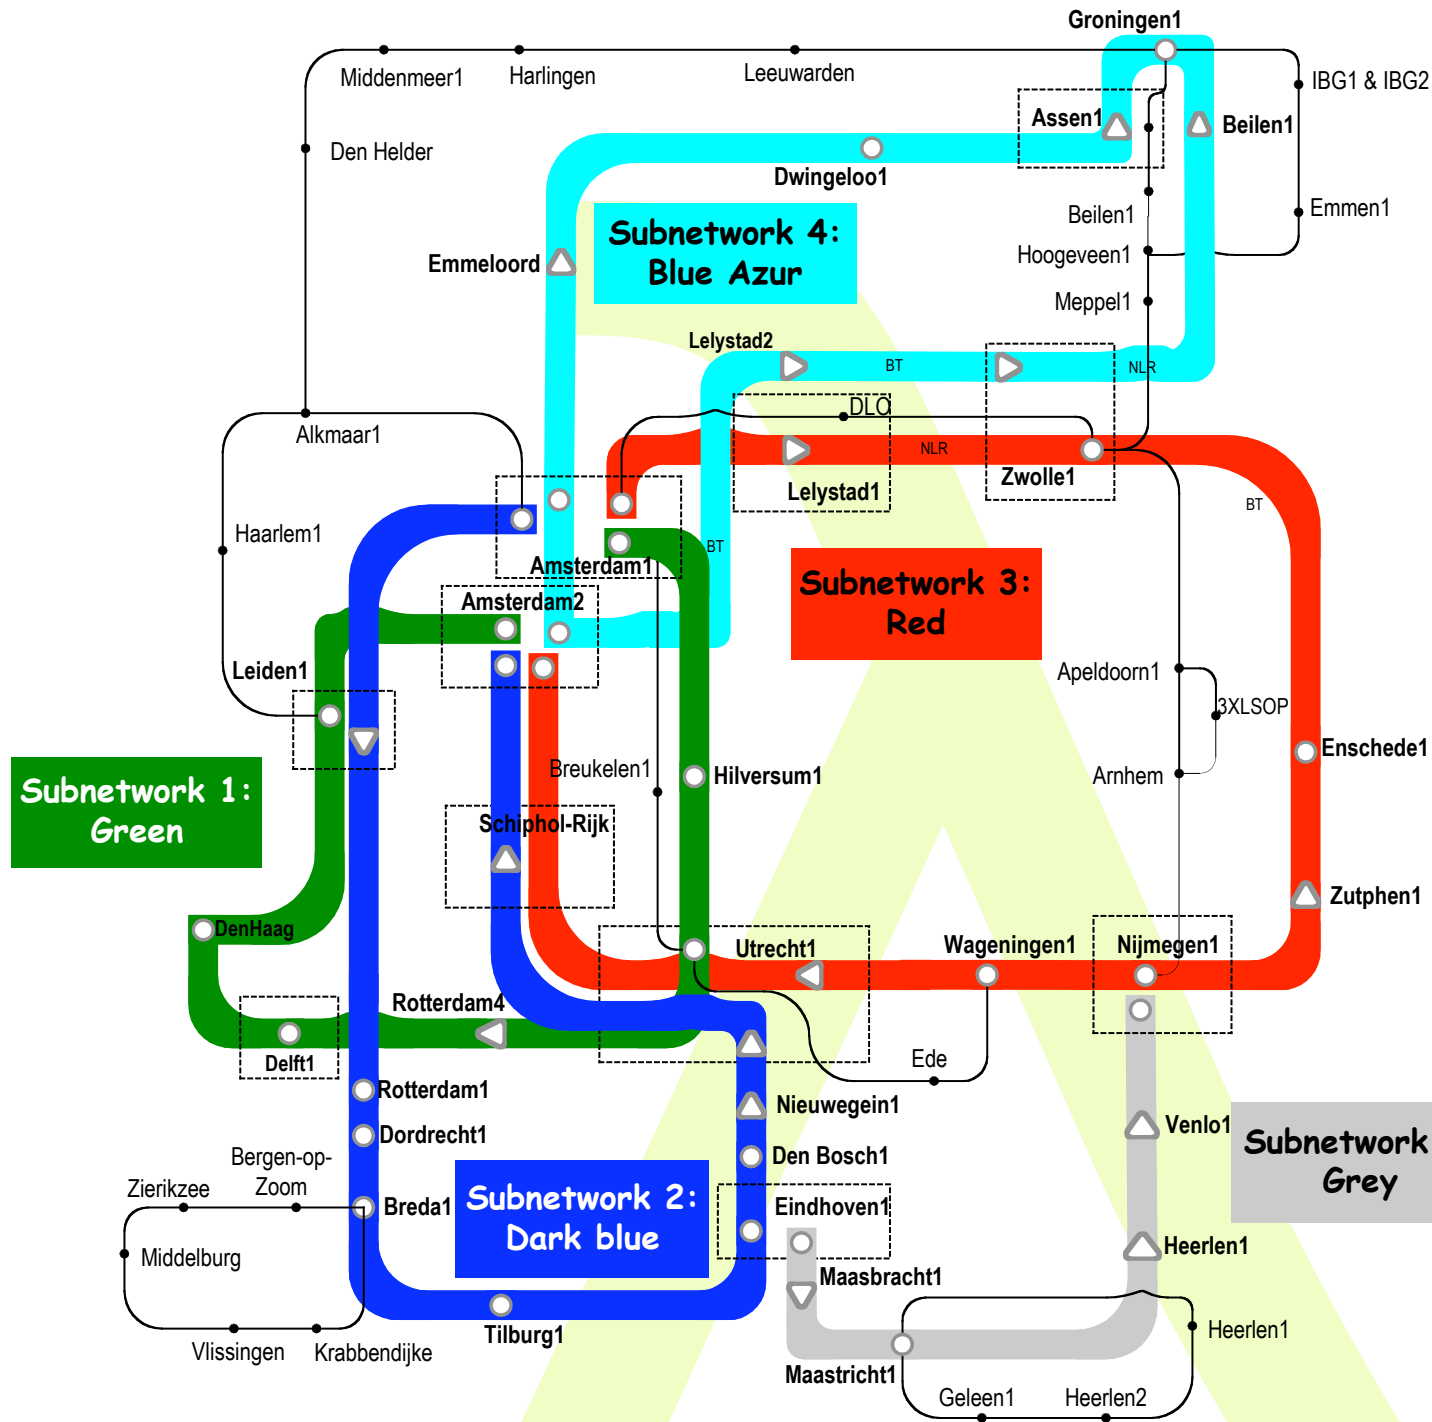

or 1/10th of an
Ethernet switch but
with specific services!

How low can you go?

Service Matrix

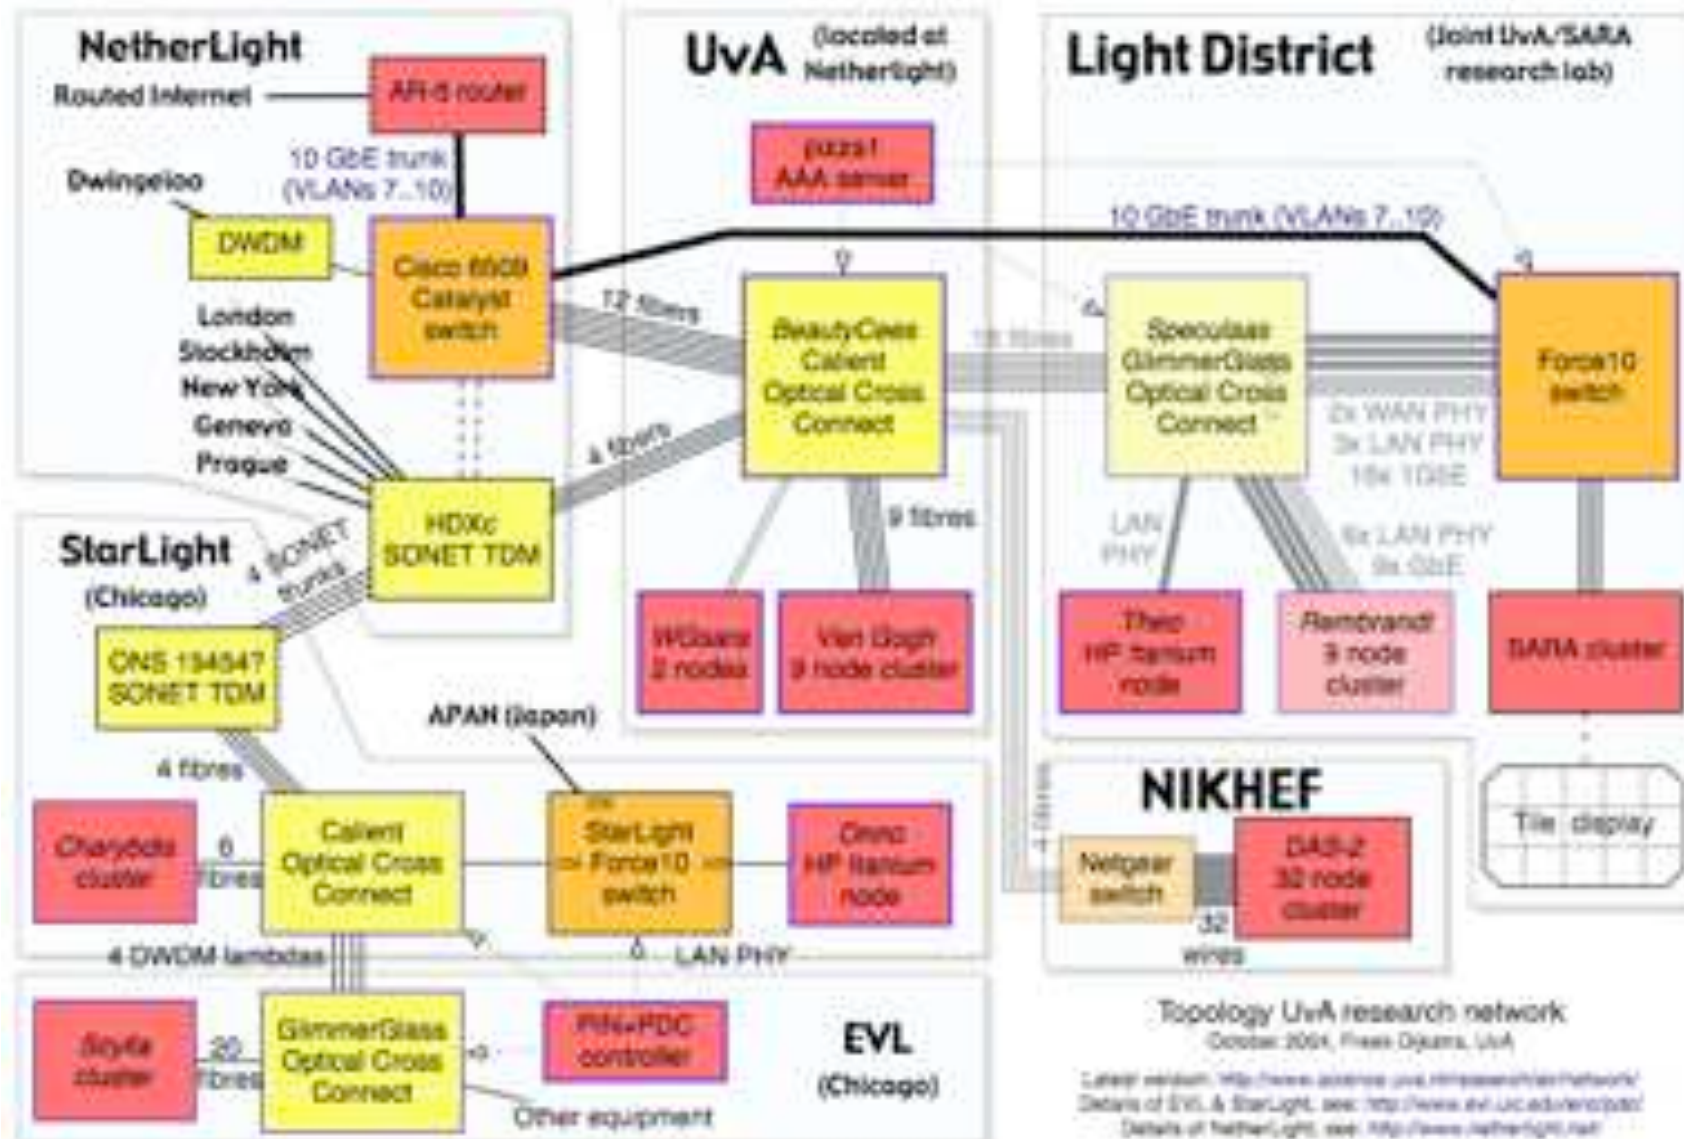

From	To	WDM (multiple λ)	Single λ, any bitstream	SONET/ SDH	1 Gb/s Ethernet	LAN PHY Ethernet	WAN PHY Ethernet	VLAN tagged Ethernet	IP over Ethernet
WDM (multiple λ)		cross-connect multicast, regenerate, multicast	WDM demux	WDM demux*	WDM demux *	WDM demux *	WDM demux *	WDM demux *	WDM demux *
Single λ, any bitstream		WDM mux	cross-connect multicast, regenerate, multicast	N/A *	N/A *	N/A *	N/A *	N/A *	N/A *
SONET/SDH		WDM mux	N/A *	SONET switch, +	TDM demux *	TDM demux ⁶	SONET switch	TDM demux *	TDM demux *
1 Gb/s Ethernet		WDM mux	N/A *	TDM mux	aggregate, Ethernet conversion +	aggregate, eth. convert	aggregate, Ethernet conversion	aggregate, VLAN encap	L3 entry *
LAN PHY Ethernet		WDM mux	N/A*	TDM mux ⁶	aggregate, Ethernet conversion	aggregate, Ethernet conversion +	Ethernet conversion	aggregate, VLAN encap	L3 entry *
WAN PHY Ethernet		WDM mux	N/A *	SONET switch	aggregate, Ethernet conversion	Ethernet conversion	aggregate, Ethernet conversion +	aggregate, VLAN encap	L3 entry *
VLAN tagged Ethernet		WDM mux	N/A *	TDM mux	aggregate, VLAN decap	aggregate, VLAN decap	aggregate, VLAN decap	Aggregate, VLAN decap & encap +	N/A
IP over Ethernet		WDM mux	N/A *	TDM mux	L3 exit *	L3 exit *	L3 exit *	N/A	Store & forward, L3 entry/exit+

Control Plane AAA

The grid approach:

- **Observe ownership, allow owner to set up the usage policy and delegation of control**
- **Ownership/AAA per port, line, service**
- **Services must be exposed at web-services (WSRF)**
- **Brokers will combine multiple web-services (multiple optical exchanges, and even other type of services like storage)**
- **Users will set up an end-to-end lightpath by contacting a broker, who checks the users rights and contacts the individual optical exchanges and Lambda owners to do the provisioning**
